

NYÉLÉNI 2007: FORUM FOR FOOD SOVEREIGNTY

DEFINITION OF FOOD SOVEREIGNTY (FROM THE DECLARATION OF NYÉLÉNI)

Food sovereignty is the right of peoples to healthy and culturally appropriate food produced through ecologically sound and sustainable methods, and their right to define their own food and agriculture systems. It puts the aspirations and needs of those who produce, distribute and consume food at the heart of food systems and policies rather than the demands of markets and corporations. It defends the interests and inclusion of the next generation. It offers a strategy to resist and dismantle the current corporate trade and food regime, and directions for food, farming, pastoral and fisheries systems determined by local producers and users. Food sovereignty prioritises local and national economies and markets and empowers peasant and family farmer-driven agriculture, artisanal - fishing, pastoralist-led grazing, and food production, distribution and consumption based on environmental, social and economic sustainability. Food sovereignty promotes transparent trade that guarantees just incomes to all peoples as well as the rights of consumers to control their food and nutrition. It ensures that the rights to use and manage lands, territories, waters, seeds, livestock and biodiversity are in the hands of those of us who produce food. Food sovereignty implies new social relations free of oppression and inequality between men and women, peoples, racial groups, social and economic classes and generations.

**SIX PRINCIPLES OF FOOD SOVEREIGNTY
(FROM SYNTHESIS REPORT)**

	Food Sovereignty:	is FOR	is AGAINST
1.	Focuses on Food for People:	Food sovereignty puts the right to sufficient, healthy and culturally appropriate food for all individuals, peoples and communities, including those who are hungry, under occupation, in conflict zones and marginalised, at the centre of food, agriculture, livestock and fisheries policies;	and <i>rejects</i> the proposition that food is just another commodity or component for international agri-business
2.	Values Food Providers:	Food sovereignty values and supports the contributions, and respects the rights, of women and men, peasants and small scale family farmers, pastoralists, artisanal fisherfolk, forest dwellers, indigenous peoples and agricultural and fisheries workers, including migrants, who cultivate, grow, harvest and process food;	and <i>rejects</i> those policies, actions and programmes that undervalue them, threaten their livelihoods and eliminate them.
3.	Localises Food Systems:	Food sovereignty brings food providers and consumers closer together; puts providers and consumers at the centre of decision-making on food issues; protects food providers from the dumping of food and food aid in local markets; protects consumers from poor quality and unhealthy food, inappropriate food aid and food tainted with genetically modified organisms;	and <i>rejects</i> governance structures, agreements and practices that depend on and promote unsustainable and inequitable international trade and give power to remote and unaccountable corporations.
4.	Puts Control Locally:	Food sovereignty places control over territory, land, grazing, water, seeds, livestock and fish populations on local food providers and respects their rights. They can use and share them in socially and environmentally sustainable ways which conserve diversity; it recognizes that local territories often cross geopolitical borders and ensures the right of local communities to inhabit and use their territories; it promotes positive interaction between food providers in different regions and territories and from different sectors that helps resolve internal conflicts or conflicts with local and national authorities;	and <i>rejects</i> the privatisation of natural resources through laws, commercial contracts and intellectual property rights regimes.
5.	Builds Knowledge and Skills:	Food sovereignty builds on the skills and local knowledge of food providers and their local organisations that conserve, develop and manage localised food production and harvesting systems, developing appropriate research systems to support this and passing on this wisdom to future generations;	and <i>rejects</i> technologies that undermine, threaten or contaminate these, e.g. genetic engineering.
6.	Works with Nature:	Food sovereignty uses the contributions of nature in diverse, low external input agroecological production and harvesting methods that maximise the contribution of ecosystems and improve resilience and adaptation, especially in the face of climate change; it seeks to “ <i>heal the planet so that the planet may heal us</i> ”;	and <i>rejects</i> methods that harm beneficial ecosystem functions, that depend on energy intensive monocultures and livestock factories, destructive fishing practices and other industrialised production methods, which damage the environment and contribute to global warming.

Scope of the Food Sovereignty Policy Framework

These six principles are interlinked and inseparable: in implementing the food sovereignty policy framework all should be applied.
